Subject: Supplier Quality Audit – Ebtec Corp.

Dear Mr. Gregory,

Thank you for the time and assistance that you and your colleagues afforded me during the recent Alstom Supplier Quality audit conducted at your facility on April 15/16, 2009. Alstom is pleased to confirm that Ebtec Corp has achieved the status of “Approved Supplier” for providing fabricated and machined welded structures.

The overall impression of Ebtec Corp. is that the Quality Management System and technical processes fulfill Alstom’s needs and you are able to perform conventional and non-conventional machining (Laser and EDM) processing on Alstom turbine components. Ebtec achieved a quality ratio of 85% and an EH&S ratio of 68%. The lower EH&S ratio reflects that you are in compliance with all local, provincial and federal requirements but that the current EH&S program can be enhanced to meet international standards.

During the course of this assessment there were no adverse responses to audit attributes considered to be non-conforming.

During the course of this assessment there were no responses to audit attributes that are considered adverse to quality (Observation) that require formal written response.

During the course of this assessment there were four (4) audit attribute responses that identified areas that could be improved and these are identified with the letter “I” (Improvement Suggestion) within the Supplier Qualification Audit Checklist. These audit attributes do not require a formal response, however Alstom would like to be kept informed of any system improvements that choose to make that would address these five attributes.

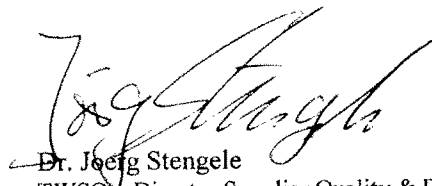

A response to this Supplier Qualification Audit is not required.

Congratulations on becoming an approved Alstom TMG supplier, we look forward to future developments with your company.

Yours sincerely,

S.C. Palmer
